

Ketan Lakhani

To Ketan and his wife, having their kids accepted into the FFCA program (NWE and NMS) was a dream come true. The commitment, spirit and dedication they have experienced as part of the FFCA community has been eye-opening.

Ketan is motivated to see how the excellent education provided by FFCA can be expanded to reach more children. In his past role on the NWE school council, he saw how parental involvement can enhance the learning experience of our children at FFCA.

Professionally, Ketan has a MSc in Predictive Analytics and is the Director of Analytics and Information Technology at the Market Surveillance Administrator. Over the last 15 years, he has used his analytical skills to tell a story to drive and influence decisions. Pictures may be worth a thousand words, but the right stories can help influence decisions to make FFCA more accessible and equitable.

Outside of FFCA, Ketan likes to be active. Since his kids have taken up recreational hockey, his skating skills have marginally improved. You can find him either outdoors or inside, experimenting with new programming code.

“Give our children the right tools, and they will design and build a better future.”
